Today, yurts often serve as recreational rental and eco-friendly homes. But they were originally designed as the primary dwellings of ancient nomadic tribes.

Why Yurts?

Mongolian Ger vs. Modern Yurt

Although the basic yurt design has remained the same, yurts have evolved from nomadic housing into environmentally responsible business practices since 1978. The yurts we make are very resource efficient, providing a maximum amount of enclosed space while responsible business practices since 1978. The yurts we make are very resource efficient, providing a maximum amount of enclosed space while maintaining a commitment to the environment.

Pacific Yurts Company Timeline

In 1973, the idea of a Pacific Yurt was conceived by architect and designer Susan Wilczynski on the steppe of Mongolia. Her inspiration came from the Mongolian ger—a portable, fabric-covered dwelling that houses the nomadic Mongolians. The concept was further developed and refined over the years, and the original Pacific Yurt design was patented in 1983. Today, Pacific Yurts has become a leader in the design and manufacture of yurts, offering a wide range of products for both residential and commercial applications.
